

**RESEARCH STUDY OF THE  
PRO-LIFE/PRO-CHOICE CAUSE**

# Methodology

- Online interviews were conducted with 1,000 adults (18-69 year-old) living across the country.
- Interviews were conducted in May 2019.
- **Key Process Goals**
  - A stratified random sample procedure based on gender, age-group, Hispanic culture, ethnic background, and area across the United States was used to insure the sample reflected the United State demographics, so the results could be generalized to the population.
  - Care was taken to insure the survey would be unbiased. Only 3%, N=34 dropped out during the survey.
